

Anubhav Malhotra

Senior Frontend Engineer / Frontend Lead

+91 73849 95155

malhotraanubhav0395@gmail.com

Bengaluru, India

Professional Experience

Frontend Lead with 5.5+ years of experience building scalable web platforms for startups and enterprise teams. I specialize in creating flexible, configurable systems that reduce development effort, speed up product delivery, and handle complex business workflows.

Currently leading frontend architecture for a large enterprise real estate platform used across multiple business units

Systems I've Built

- * Backend-driven UI platform (config-based rendering, dynamic pages, runtime control)
- * Dynamic form builder with validation, API integration, and reusable components
- * Workflow engine with approval, delegation, and stage-based execution
- * Role-based access control system with fine-grained permissions
- * Dynamic routing and page generation system (no hardcoded pages)
- * Real-time data dashboards with role-specific views and updates
- * AI-powered audio processing pipeline (analysis → decision → transformation loop)
- * Scalable frontend architecture supporting multiple business units

Education

**2017-2020 | Bachelor of Computer
Applications (BCA)**

Sikkim Manipal Institute of Technology

What I Bring

- * Build systems that reduce engineering effort (up to 60%)
- * Design backend-driven platforms where features can be launched without frontend changes
- * Create configurable systems that scale across multiple teams and business use cases
- * Turn complex workflows into structured, automated systems (approvals, staging, role flows)
- * Strong focus on performance, reliability, and production-grade architecture
- * Experience working closely with product, backend, and business teams
- * Translate complex technical systems into simple, usable products for end users
- * Strong ownership mindset — able to take systems from idea to production independently
- * Build reusable platforms (forms, workflows, dashboards) instead of one-off features
- * Optimize systems for long-term scalability, maintainability, and speed of development

Work Experience

Jun 2025 – Present | **Senior Software Developer (Frontend Lead)**

Exalogic Consulting (RealCube 2.0)

- * Leading frontend architecture for a large-scale real estate platform used across multiple teams
- * Built a system where UI is controlled from the backend, allowing faster feature rollout without frontend changes
- * Reduced development effort by ~60% by eliminating repetitive UI work

Key Contributions:

- * Created a platform that automatically generates pages (view, edit, listing) based on configuration
- * Built a reusable form builder supporting 20+ field types with validation and API integration
- * Designed a workflow system (approve/reject/delegate) used to manage business processes across teams
- * Implemented role-based access control, enabling fine-grained permissions for different users
- * Built dynamic dashboards tailored to different user roles

Performance & Impact:

- * Reduced page load time by ~40%
- * Improved user experience significantly (LCP reduced from ~4.5s to ~1.8s)
- * Optimized frontend using lazy loading, caching, and better rendering strategies

Oct 2024 – Mar 2025 | **Frontend Engineer**

Mobikasa Pvt Ltd (Remote)

- * Built scalable frontend applications using React and Next.js
- * Developed a barcode scanning web app using camera-based workflows
- * Created a drag-and-drop website builder with reusable templates
- * Built a pricing dashboard integrated with Google Sheets

Apr 2023 – Oct 2024 | **Frontend Engineer**

SKMTek Pvt Ltd

- * Developed dashboards and analytics tools with complex filtering and data handling
- * Built real-time data visualizations and reporting systems
- * Created an email marketing tool with drag-and-drop templates and campaign tracking

May 2022 – Apr 2023 | **Co-Founder & Technical Lead**

Mountains Call Travels

- * Developed dashboards and analytics tools with complex filtering and data handling
- * Built real-time data visualizations and reporting systems
- * Created an email marketing tool with drag-and-drop templates and campaign tracking

Apr 2021 – Apr 2022 | **Web Developer**

The Thought Factory DMCC (Dubai)

- * Built high-conversion landing pages and a mini CRM system
- * Developed dashboards for different user roles
- * Worked on performance marketing and SEO

Softgates Technologies

- * Built admin panels and integrated frontend with backend systems
- * Quickly adapted to new tech and contributed to production systems

KEY PROJECT

AI-Powered Vocal Processing Tool

Built an AI-based application that takes a reference song and automatically applies similar sound effects (EQ, reverb, compression, autotune) to another vocal track.

What it does:

- * Compares two audio tracks
- * Detects how the reference audio is processed
- * Applies similar effects automatically
- * Returns a processed version with explanation

Why it matters:

- * Simplifies complex audio production workflows
- * Saves time for creators who don't have deep technical/audio knowledge

Tech (simplified):

- * AI models + LLMs to decide effect chain
- * Custom audio processing pipeline (DSP)
- * Real-time processing updates via web app

SKILLS

- Frontend: React, Next.js, TypeScript, Vue
- Architecture: Scalable UI systems, config-driven platforms
- Performance: Optimization, Core Web Vitals, caching, lazy loading
- Systems: Role-based access, workflows, dynamic UI platforms
- Tools: Redux, Jest, Docker
